- Designed relational databases and performed basic C.R.U.D functions as well as processing dynamic data.
- Defined functional requirements for systems and broke down the implementation process into achievable stages, as part of mastering solutions architecture.

---

## Skills & Proficiencies

### Tools and Languages

- HTML and CSS
- PHP
- Javascript
- Figma
- Adobe Illustrator
- Adobe XD
- MYSQL
- Git

### Interpersonal communication skills

*I understand the importance of communication within an organization and a team. I have therefore taken the time to practice and hone this skill to work to my advantage in delivering set targets*

### System design and development.

*The system design and development process is complex and can be a major setback, when one does not fully understand it. Throughout my studies and career, I have become conversant on the different procedures that take place in the development of any system and why these procedures must be put in place.*

### Critical thinking and problem solving

*These two go hand in hand and throughout my career I have developed a roadmap that has worked in multiple instances. I take time to observe targeted users, analyse their needs then come up with a plan. These three basic steps allow me to focus on the goal, which is always the intended user, to come up with long-term solutions. I am a lover of arts and psychology and often consult them in the design and development process.*

### **Personal skills**

*I have come to learn alot about my personality in terms of strengths, weaknesses, opportunities and threats. I beleive in continuously working on each of these elements to develop self-discipline which is critical in my career, and also as a leader.*
